Review “[A] smoothly written suspense novel from Thriller Award finalist Mayne...The action builds to [an]...exciting confrontation between Cray and his foe, and scientific detail lends verisimilitude.” —Publishers Weekly

About the Author Andrew Mayne, star of A&E’s Don’t Trust Andrew Mayne, is a magician and novelist ranked as the fifth bestselling independent author of the year by Amazon UK. He started his first world tour as an illusionist when he was a teenager and went on to work behind the scenes for Penn & Teller, David Blaine, and David Copperfield. Andrew’s novel Angel Killer is currently in development for television by Twentieth Century Fox and Temple Hill Entertainment. He’s also the host of the Weird Things podcast.

Assuming you read the synopsis, I'll just add a few comments. We are following the perspective of Theo, who is a bit socially awkward and doesn't really possess any street smarts. He discovers that a former student of his was murdered, but his scientific brain doesn't accept the

poorly explained circumstances indicating that the attacker was just a bear. He is the only person who thinks that the culprit is human, and his suspicions take him down a very interesting path. This character seems stiff and detached at first, but as he experiences each new situation, his personality adjusts and he becomes a very entertaining person to follow. He is extremely intelligent, so at first I was worried that I would just be fed a jumble of scientific jargon, however the author brilliantly explains some of the surprisingly interesting details and theories through the story. The plot is slow and steady at first, however it is immensely captivating, because what we know about this killer adds a folklore-type sense of mystery. The story does pick up as the main character unearths more bodies and discoveries. I love that the author added some chilling moments when Theo thinks he's being watched, and I'm always impressed by the addition of a strong female influence. We meet a woman named Jillian, who proves she can handle almost anything thrown her way. I read this all in one sitting and I was sweating from anxiety by the time I reached the ending! On that note, the ending was spectacular! I'm so happy that Mayne pays attention to detail, because he does an expert job of laying out the sequences of events during this thrilling and terrifying ending in a clear and easy to follow manner. I've read many thrillers that neglect to account for some piece of information that makes me trip up and question what I'm picturing. I'm trying to think about other things that I ask about before reading suspense novels. I hope these aren't spoilers, but I'll say that there was some foul language, but not excessively throughout. Some mentions of drug and other adult centric themes, but there wasn't any graphic sexual content. There was some violence and detail of bloody injuries, but it wasn't overly grotesque or unbearable for the average reader. The ending was slightly open, enough to make you want more, but there definitely wasn't a cliffhanger. Overall this book was outstanding, and I can't wait to read the next one! 152 of 166 people found the following review helpful. Sherlock Holmes meets Michael Crichton By Hudson A One of the best things to come through Amazon Prime - I am so happy I downloaded this one. I started reading it this morning (a cool windy day) and despite a run for coffee and bagels, finished it this afternoon. If you like Sherlock Holmes or Michael Crichton books you'll like the main character and the story. A lot of fun. 0 of 0 people found the following review helpful. Scientific crime thriller By DiL Enjoyable crime thriller where the protagonist is a socially awkward scientist and uses his scientific acumen to find a serial killer. The story is told in first person and is well paced but has some flaws. Most of the law enforcement characters (other than the initial cop we are introduced to), are painted as a bunch of narrow minded and dim-witted bricks, even the FBI guy. Don't know how realistic that is but it's obvious they're all written to be stupid and skeptical so that the scientist is forced to act as a lone wolf in hunting for the serial killer. The action packed ending becomes a cliché like you would see on a TV show instead of going for something more nuanced and clever. Our hero essentially becomes a scientific MacGyver in spite of ridiculous circumstances. Hopefully, these clichés will be avoided in the second book and include more character development.
